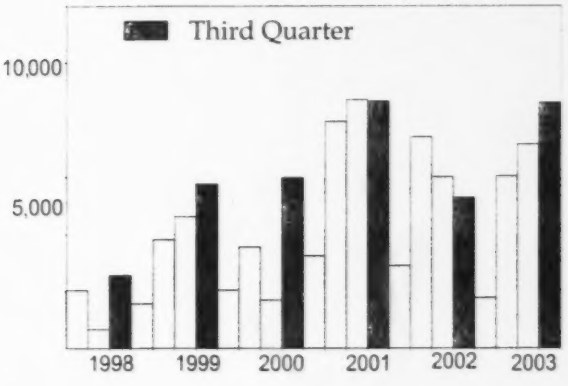
Migration Highlights ◆ Third Quarter 2003

The third quarter figures show a turn around in interprovincial migration flows. All three months in this quarter, July, August, and September, show positive net migration to the Province. It has been 66 months or 5½ years since British Columbia has had more people moving in from other provinces than those moving out.

During the third quarter of 2003, BC gained an estimated total of 8,606 persons as a result of net migration from all sources. This compares to an increase of 5,276 in the third quarter of 2002. Stronger interprovincial migration accounted for the increase. Quarterly net migration from all sources continues to be higher than the decade lows of 1998.

BC Quarterly Net Migration - All Sources



Net international migration to the province showed a net inflow of 5,992 persons, 15% lower than the third quarter of 2002. While the number of immigrants was higher, there were fewer non-permanent residents (NPR) coming to BC.

BC's share of total Canadian immigration declined marginally to just under 15% in the third quarter (14.97%). The number of non-permanent residents declined to 1,146 persons in the third quarter of 2003, from 3,243 persons in the same quarter of 2002.

In the third quarter of 2003, 18,215 people moved to BC from other places in Canada, while 15,600 moved out resulting in a net inter-provincial migration of over 2,600 people. The number of people coming to the province has been rising over the last three years, but until this last quarter was surpassed by an increase in out migration. Only in this last quarter has out migration declined sufficiently to result in a positive net flow.

The annual British Columbia population growth was marginally higher than the Canadian average at 0.88% in the third quarter. Alberta (1.2%) and Ontario (1.1%) both registered stronger annual population increases than BC. However, Yukon had the highest growth of any region, at just over 3%.

Population Growth Third Quarter 2003	(000s)
Population: Jul 1, 2003	4,146.6
Plus Interprovincial Arrivals	18.2
Minus Interprovincial Departures	15.6
Plus Immigrants	9.5
Minus Total Net Emigrants	4.5
Net Non-Permanent Residents	1.1
Plus Births	10.3
Minus Deaths	6.9
Population Oct 1, 2003	4,158.6

Summary

Migration, both between provinces and within the province, is a major factor in the population change of regions in British Coulmbia. In addition to affecting the total population, the age of the migrants also influences the types of goods and services required to meet the needs of people.

Unlike international migration, which is largely concentrated in the lower mainland, interprovincial migration (between other provinces) and intraprovincial migration (between regions within BC) have a more wide-spread impact across the province. Information on regional migration is now available for the period July 1, 2001 to June 30, 2002. During this period the province experienced negative net migration, an outflow of 6,994 people to other provinces. This resulted from a relatively small inflow of 52,654 people from other parts of the country, accompanied by higher outflows of 59,715 people. The following table shows the regional districts with the largest inflows as well as those with the largest outflows.

Across the province, 8 regions had positive net migration, inflows, from other provinces. Perhaps not surprisingly, the Capital Region had the highest inflow with 6,473 people moving in, -while 5,045 people moved out- for a population increase of 1,428 people. The other large core area in the province, the Greater Vancouver Regional District, on the other hand, had the largest negative net interprovincial migration with 22,196 people moving in but 24,474 people moving out to other provinces resulting in a net outflow of 2,278 people. Other high negative figures came from the interior of the province; from Fraser-Fort George and Thompson-Nicola.

Intraprovincial migration measures the number of people moving from one area to another within the province. Over the 2001 to 2002 time period, only 90,155 people migrated between Regional Districts, a relatively low figure. There tends to be a relationship between interprovincial migration and intraprovincial migration. Periods when there are more people moving into BC from other parts of the country are also times when more people move within

104-01597/

For example, in 1989/1990, 82,200 people migrated to BC from other provinces and 140,800 people relocated to another region within the province. The comparable figures for 2001/2002 were 52,654 people in from other provinces and 90,140 people moving within the province. The ratio for both components for both years being approximately two to three. Both types of movement may reflect the general economic situation in the province. However, as is discussed later, retirement is increasingly influencing migration patterns.

In the 2001/2002 time period, the Central Okanagan and the Capital Region had net inflows of people from within the province, with estimates of 1,593 and 1,148 respectively. Again, as was the case for interprovincial migration, Greater Vancouver and Fraser-Fort George had the highest net intraprovincial outflows with estimates of -1,732 and -920 respectively.

The following table shows the regional districts with the largest inflows as well as those with the largest outflows.

Greater Vancouver has experienced a reduction in net outflows to both other provinces and other regions during the last several years from highs of over -8,700 people per year in 1998/1999 to -4,650 in 2000/2001 and -4,010 in 2001/2002. This is due in large part to a decline in negative net interprovincial migration from highs of over -5,000 people in 1998/1999 to -2,275 in 2001/2002. However, in each time period the region received net inflows of people from other countries. Over 90% of the people coming to the province from other countries move to the Greater Vancouver Regional District. In 2001/2002, over 18,000 immigrants moved to the GVRD. Other regions of the province receive much lower international migration. In 2001/2002, the Fraser Valley had the second highest number of immigrants at 587 people while the Capital Region received 586 people from outside of Canada.

Age of Migrants

Migrants are most often people in their late teens to mid-twenties, usually moving away from their

GREATER VANCOUVER	5,005	2,940	7,665	8,707	2,914	4,366	1,577	1,833	20,847	22,579	-1,732

childhood home, seeking education and or employment. Thereafter, often those between 25 and 44 move again to start families of their own, for work and to improve their housing. Between 45 and 64, people tend to move as children leave the home and in some cases, as work is no longer required. After 65, people may move due to retirement, sometimes moving away from high density areas to places outside of high commuter flows or they may move to be closer to amenities.

In the 2001/2002 time period, approximately 38% of population loss as a result of net **interprovincial** migration was between the ages of 25 and 44. Persons in this age group tend to move for economic reasons, often aimed at meeting commitments to the nuclear family. Although, the 18 to 24 year old age group only includes six years, or less than a third of the 25 to 44 age group, they accounted for over 20% of the population loss in 2001/2002. Persons in this age group tend to have fewer commitments, both in terms of family and assets, than those in the older age groups, resulting in relatively lower social and economic costs from migration.

Intraprovincial migration is more evenly distributed by age. In many cases the social and economic costs of moving to another part of the province are much lower than for moving between BC and another province, especially if the move is to a neighbouring region.

Although the proportion of **interprovincial** migration attributable to seniors is relatively small, it is increasing as more people move into retirement age and as retirees become increasingly mobile. As well, their migration is less likely to be affected by the relative economic conditions in different provinces. Nonetheless, interprovincial migration for people in this age group is far less likely than is intraprovincial migration. In 2001/2002, only 3,080 people 65 and over moved into the province while approximately 7,000 elderly moved within the migrants while they also had more intraprovincial out-migrants than in-migrants. Perhaps, one of the reasons that the Central Okanagan has such a high positive net intraprovincial migration is that it attracts people of working age as well as those who no longer need to live in close proximity to work, eg. retirees. Yet, while this region gained close to 1,600 people in 2001/2002 from intraprovincial migration it lost approximately 60 people to other provinces. The greatest net loss was for those 18 to 24, with 497 moving in but 784 moving out. However, this trend of negative net interprovincial migration for this age group was not uncommon as only four regions had positive figures. The Capital Region and the GVRD had more people move in than out, perhaps due to educational opportunities as well as other economic and social reasons. Squamish-Lillooet also had positive flows, likely due to the attractiveness of the Whistler resort for work and play. The only other region with positive flows for youths was the Northern Rockies which has been particularly attractive to males who can earn relatively high wages while living in wide open spaces.
